## Products

■ “The development, manufacturing, and sales of scientific instruments that aim to improve QOL of biochemistry researchers”

Researchers of biochemistry-related fields, such as regenerative medicine and new drug discovery, often have to spend an enormous amount of time and efforts for everyday routine experiments. As a result, it is difficult to secure the time, energy and stamina for the truly essential activities that require their expertise. CORESCOPE’s mission is to provide products that “should exist in theory, yet do not exist in reality,” to reduce the routine works for experiments and to create “new time” daily for the researchers. Our flagship product, “the multi-channel aspirator,” can improve the efficiency of daily medium replacement by eight times. We also develop and distribute numerous products including the apparatus uses warm air to keep centrifuge tubes warm without using water.

## Message

*We are currently searching for a partner distributor to expand to overseas market. We are also considering and planning for business partnerships for overseas production in the future. If you are interested, please don't hesitate and make contact with us.*

## Reference information

CEO’s Profile: a mechanical and electrical engineer who works with the industry, while engaging in the research of artificial joint and regenerated cartilage. Doctor of Philosophy (Ph.D.) in Engineering Taking advantage of the existing know-how and human resources for the development and sales of niche products that “should exist in theory, yet do not in reality.”
